

Quick Start Guide for the CoolCopyD DVD/CD stand-alone Duplication System

Thank you for purchasing the CoolCopyD Duplication System. This guide will help you be on your way to duplicating either CDs or DVDs at a rate you never would have imagined! The CoolCopyD DVD/CD duplication tower is easy to use and is designed to duplicate multiple discs simultaneously, quickly, and efficiently.

How to set up and use the CoolCopyD DVD/CD Duplication System

1. First off, you will have to take the extension cord out of the packaging and plug the cord in the socket located on the lower right corner of the tower.
2. The cord only fits in electrical sockets with 3 holes, so make sure you have the correct outlets.
3. Be sure to set up the tower on a sturdy, horizontal platform, such as a floor or a desk.
4. Once the system is plugged in, press the power button located on the front panel of the tower on the lower right corner. You should notice that the green light will turn on and the fans will start making noise.
5. Place the source disc in the DVD-ROM drive located in the highest slot of the tower.
6. To duplicate the source CD, all you have to do is place blank CD_±R and/or DVD discs into corresponding drives. Blank CD_±R discs can go into both CD_±RW or DVD_±RW drives, while blank DVD discs can only go into DVD_±R drives.
7. When the CoolCopyD Duplication System finishes duplicating a disc, the drive will automatically eject the duplicated disc and all you have to do is replace the copied disc with another blank disc to continue the process. It is that easy!
8. Please note that the source disc will NOT eject itself.
9. When finished, be sure to take the discs out of the tower and press the power button to turn off the tower.
