

Quick Start guide to the Wytron Series DVD Duplicator standalone system

Congratulations. You've just purchased the Wytron Series DVD Duplicator standalone system. It comes with an easy-to-use operating control panel, which includes an LCD screen and 2 push buttons. All operating messages and information including function list, instructions, operating status, or error message(s) will display in real time on the screen.

Follow these steps for easy set up:

1. Unpack the duplicator package.
2. Check the entire unit.
3. Plug extension cord into an electrical outlet.
4. Hit the power button at the front panel on the lower right-hand corner.
5. Open the top disc source tray by pushing its button.
6. Place the source disc, the disc you want to copy from, into the top disc drive.
7. Close that disc tray.
8. You can begin duplicating your discs. To do so, place the blank CD±R in the drives. Your discs will immediately get duplicated once the blank discs are in place. Just repeat the process until you finish your duplication job.
